My Dear Mr. Eaton,

I send, as I threatened, specimens of my Rubiaceous genus. It is, Dr. Asa Gray, a true Galium and, I think, a new & good species - very distinct.

There are some 50 specimens from three localities, a hundred miles or more apart, and not half a dozen show any evidence of stipules. All were found in the dry shade of rocks or trees, at an altitude of 1500 feet.

All [illegible] but Bot.

Yours truly

S. Watson

My Dear Sir,

Mr. King promises me fifty plants for my report. I think it will have more than enough materials for them, and that time will be more or less occupied in studying these specimens. I have here some few species, I have nearly reached the Aptalas, and expect to go on to Cambridge for a time to study up uncertain points, and complete what I have gone over imperfectly here. I will probably have to consult your Herbarium upon some points. – I enclose my list. May I hope for yours in Exchange?

Dear Doctor,

Have you in your Herb. Isotheca Streptanthus heterophyllum and can you send me a few pod with seeds. Some of the Streptanthus turn out to have incumbent cotyledons & some to go back in Thelypodium. This may be one of them. Will you also add a seed or two of Clematis Mexicana, of the original C. longipes, and of the tall plant that is now going by that name. I am inclined to think that the seeds will give good distinctions

between these species, that are getting
to be pretty perplexing.—

Yours Very Truly

Asa Gray

My Dear Sir,

I think you have named in your Herbarium the enclosed Astragalus (among the Triphylli, if I remember right.) What is the name that you have given and where did you find your specimens? I have quite sufficient to show that it is a true Astragalus, and not Phaca.

Have you published your "Dalea polydenia"? I would be glad to have an English description for my report

if you will be kind enough
to furnish it.

I wrote about some Streptan-
thus a few days ago. No matter
about it now. I will look it
up when I come down.

In haste

Very Truly Yours

Byron Halsted

My Dear Sir,

This is to
communicate to you if I
come down on Wednesday,
or a few days? If it
will make no interference
with your own arrange-
ments I will be very glad to
do so. Or I can put it off
some weeks longer.

Yours very truly
Asa Gray
